

Well, tell us well that.

The project is that.

you had several languages and you had some doubts about management and lacking the new More in the ble
waar below, because.

the total for hundreds of quarters, and now that.

that, so.

I will have to.

redirect, that's why the school was very revivalist, but he is going to take office.

I had an older one recorded by that similar one.

And then, to make the solo and put it in the question, question, the language of equal is the faith of refrancer
and the mother who.

he mated it.

So, you're going to have 20 QRS, 20 URLS, right? Okay..

So what happens? You already have the QRS, but they are URLs, let's say, friendly or generic, right? I'm not
going to give myself a specific URL either, because.

I don't know the school that.

lead to use.

Sure, yes.

Ok, but let's ignore that.

the QRS that.

They are going to give you their domain, like that, town hall com,.

bar tur 1 and language 1.

That would be.

Sure, yes, but what.

Your URL will not have the language media question mark or anything like that, it will have tur 1 and
language 1, tur 1 and language 2.

It's something like that, right? Okay..

Ok, so let's do a test..

I have here, like the 4 tours, okay? And we're going to put something that.

change the language, okay? Let's put some text here.

So now I go to project and language and here I add a language, let's put English, right? Ok, let's put 3 so we can play..

So, english, skin, text.

Here we put it.

Let's do preview.

Well first of all, we have a question mark here..

There it is, okay? And FR, there it is..

There we have the 3 URLs.

Language is, language ny language FR, okay? We have French with tur 1, French with tur 2, French with tur 3 and French with tur 4.

I'm going here, that, to the first pano of each tour, right? Here it is by color, so here we have everything in French.

We have the 4 tours in Spanish.

And the same with English..

So that.

your client's URL, which.

you have already done it, it is not this one, this is the one.

you need.

So this would be our URL and we need the client's URL.

This is ours and I'm going to put client here, right? They're going to have a domain that.

There is a tab, bar, QR1 and inside QR1 that.

would be the 1, let's put the languages, okay? And then, I paste the index and drag it to the 3.

Okay, there, okay..

Let's see.

There it is, it is fixed.

There we have the 1, okay? There is a QR tab and language 1, this is what.

He will give it to you and you have to.

put it in, you have to.

give him there, an index, this folder structure, so that.

This takes you to the one.

you want.
